

# Student Growth Sample Data Set

## PRE-TEST DATA SET

---

Using the data below calculate the expected growth target using one of the six methods we discussed today.

| Student Name | Pretest Grade | Expected Growth Target |
|--------------|---------------|------------------------|
| John         | 22            |                        |
| Amelia       | 30            |                        |
| Evan         | 72            |                        |
| Yaseen       | 46            |                        |
| Cristobal    | 17            |                        |
| Mina         | 76            |                        |
| Kate         | 80            |                        |
| Tanvir       | 88            |                        |
| Yasmin       | 72            |                        |
| Luis         | 50            |                        |
| Abi          | 58            |                        |
| Shannon      | 68            |                        |
| Gerardo      | 90            |                        |
| Frank        | 64            |                        |
